PROFILE OVERVIEW

Java Backend Developer with 4+ years of experience designing and building scalable, reliable, and maintainable backend systems for both B2B enterprise platforms and B2C consumer products. Proven track record owning services end-to-end — architecture, API design, event-driven integrations, and production support — across loyalty management, network monitoring, managed hosting/security, cloud infrastructure, and multi-tenant restaurant platforms. Regularly takes on senior-level responsibilities including giving Demos, solution design, stakeholder discussions, code reviews, and mentoring engineers. Skilled in workflow automation (Flowable BPMN), messaging systems (Kafka, RabbitMQ, MQTT, AWS SQS/SNS), Docker/Kubernetes-based deployments, and CI/CD pipelines, applying GOF, JEE, and Microservices design patterns to build high-performance systems.

SKILLS

Languages: Java, SQL

Frameworks / Libraries: Spring, Spring Boot, Spring Data JPA, Spring Security, Spring Cloud Config, Spring Integration, Microservices Architecture, REST API Development, Flowable BPMN, MapStruct, Flyway, Thymeleaf, Groovy + Spock (Unit Testing)

Databases: MySQL, MongoDB, PostgreSQL

Messaging / Streaming: Apache Kafka, RabbitMQ, Eclipse Mosquitto (MQTT), AWS SQS, AWS SNS

Cloud & DevOps: AWS (ECS, SQS, SNS), Docker, Docker Compose, awareness about Kubernetes, Jenkins, CI/CD, Git, Maven, ELK Stack, Kibana, Log4j, New Relic, Jacoco

Tools & Platforms: IntelliJ IDEA, Eclipse, VS Code, Spring Tool Suite, Postman, pgAdmin, Jira, Firebase Cloud Messaging (FCM), Ubuntu, Raspberry Pi

Design & Architecture: System Design, Multi-Tenant Architecture, GOF Design Patterns, JEE Patterns, Microservices Design Patterns, Event-Driven Architecture

WORK EXPERIENCE

Senior Software Engineer

Jan 2026 – Present

NeoSoft Technologies, Noida (Client: Sparx IT Solutions) — Wave: Multi-Tenant Restaurant Management Platform (B2C)

- Lead backend development of Wave, a multi-tenant restaurant management platform covering order management, reservations, customer engagement, and real-time communication, owning architecture, design, and delivery of core backend services.
- Designed and implemented a scalable multi-tenant ordering system handling concurrent orders with strict tenant-level data isolation and high performance.
- Architected an offline-first solution using Eclipse Mosquitto (MQTT), enabling restaurants to keep operating during network outages with automatic data synchronization on reconnection.
- Integrated Firebase Cloud Messaging (FCM) for real-time customer and operational notifications, and implemented asynchronous, event-driven communication using AWS SQS and AWS SNS for reliable, scalable service-to-service messaging.
- Applied microservices architecture and Spring Boot best practices (Spring Data JPA, Hibernate, Flyway, MapStruct, Spring Security, JWT) to deliver maintainable, high-performance backend modules.
- Mentored junior engineers through code reviews, technical discussions, and architecture guidance to uphold engineering standards.

Software Engineer

Aug 2024 – Dec 2025

MasterCom Technologies, Chennai (Client: Tata Communications Limited) — Olio, Managed Hosting Service (MHS), Managed Security Services (MSS), Vayu Cloud

- Served as primary backend engineer on Vayu Cloud, owning end-to-end development and deployment of Snapshot Services and Backup Services; designed scalable microservices and REST APIs using Java and Spring Boot for enterprise cloud operations.
- Owned architecture, design, and delivery of the Managed Hosting Service (MHS) backend, building BOQ processing, Quote Management, Customer Order Form (COF), Order Management, and workflow automation for the full infrastructure order lifecycle.
- Implemented workflow-driven business processes using Flowable BPMN across MHS, MSS, and Vayu Cloud, automating multi-stage approvals, task assignments, contract generation, provisioning, and order fulfillment.

- Integrated platforms with the Geneva Billing System (Oracle) to automate billing after successful infrastructure provisioning, and developed scalable REST APIs/microservices enabling collaboration across multiple internal teams.
- On Olío (network monitoring and event processing) and Managed Security Services (MSS), investigated production incidents by analyzing application logs, PostgreSQL/Redis health, and system metrics; diagnosed and resolved high-priority production defects, improving platform stability.
- Led production deployments and release activities, performed proactive infrastructure health checks, and mentored team members while collaborating with business stakeholders to translate enterprise workflows into configurable backend solutions.

Junior Associate Consultant

Jul 2022 – Feb 2024

Loyalty Methods, Hyderabad — Loyalty Management System (B2B)

- Re-architected and replaced legacy Proxy and Digital services with a modern middleware built on Java 17 and Spring Boot, improving maintainability and reducing AWS infrastructure costs.
- Developed a client-specific routing service that processed business rules, published events to Apache Kafka, and managed phased feature rollouts using Spring Cloud Config.
- Built a reusable MongoDB library providing a common, extensible data access layer for multiple services, improving development efficiency and code reuse.
- Supported zero-downtime client onboarding by monitoring buffer and buffer-replay processes, resolving production issues, implementing enhancements, and providing deployment support.

KEY PERSONAL & FREELANCE PROJECTS

Full write-ups for these and all professional projects (Loyalty Management System, Olío, MHS, MSS, Vayu Cloud, Wave) are available on my portfolio: ankitjavaarena.github.io/Ankit-portfolio

Inventory Management System (ERP) — Solution Architect & Lead Backend Developer | In Development

B2B ERP platform helping manufacturers, wholesalers, and distributors manage inventory, procurement, and warehouse operations. Designed the overall system architecture, multi-tenant strategy, and database schema; built authentication and user management modules; defined backend architecture, coding standards, and API design; and collaborated with React/React Native developers on API design and application flows while driving the product roadmap.

Tech: Java, Spring Boot, Microservices, PostgreSQL, Spring Data JPA, Hibernate, Flyway, MapStruct, Spring Security, JWT, Docker, Docker Compose, React, React Native

DMS Mail Service — Personal Project | In Development

Reusable email automation microservice for high-volume transactional emails, bulk campaigns, and cold-email outreach, with centralized processing, scheduling, delivery tracking, and reporting. Built REST APIs for campaign/template management, integrated Gmail SMTP, developed dynamic Thymeleaf email templates, implemented retry/rate-limiting for delivery reliability, and added open/click/bounce tracking with Excel and PDF report export.

Tech: Java, Spring Boot, Spring Mail, Thymeleaf, H2 Database, Gmail SMTP, Scheduling, Excel/PDF Report Generation

Demo: <https://youtu.be/mWVlybDYZQI>

EDUCATION

Master of Computer Applications (MCA) — Sunrise University (Apr 2023 – Aug 2025)

Bachelor of Computer Science (BCS) — Mahatma Gandhi Chitrakoot University (Jul 2017 – Mar 2021)

TRAINING & CERTIFICATIONS

- Full Stack Java Training (NareshIT) — Java, Spring Boot, Oracle SQL, and Microservices Architecture, with hands-on real-time project development including backend services and database integration.
- NASSCOM Certified Java Backend Developer
